Name: Julio Barros
Case: Justin Casey
10 Points

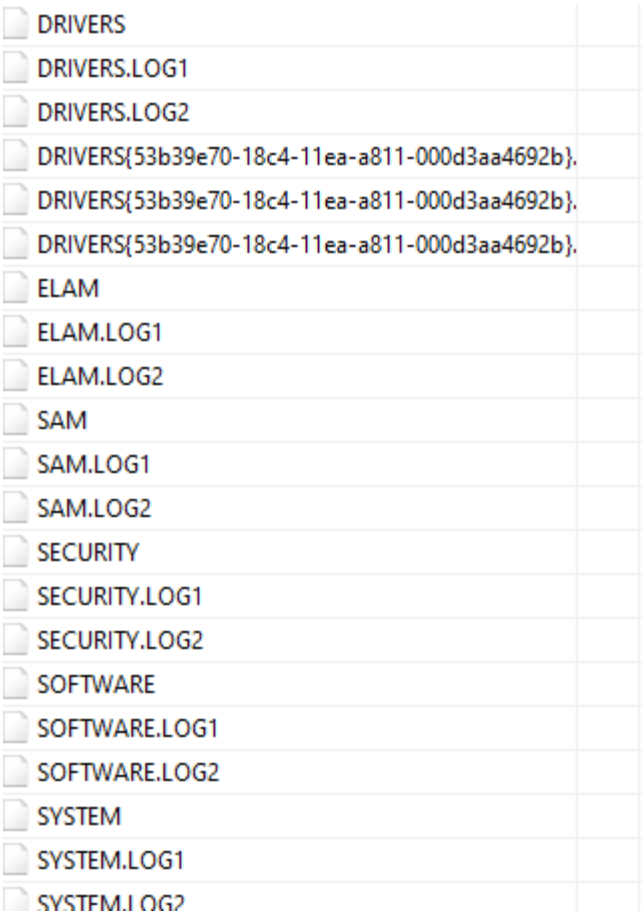

Intellectual property (IP) commonly stolen includes customer lists, secret formulas, source codes, strategy documents, and other trade secrets. In this case, "Justin Case" is being investigated due to his strange behavior before leaving the BigaCorp company. BigaCorp is a builder of new technology. It appears that Justin was frantically copying files and planning a trip abroad after he announced he was leaving the company. After leaving BigaCorp, Justin works at a company that competes directly with his past position. A BigaCorp colleague has mentioned to management that Justin was also considering moving abroad. Given the type of work Justin is now doing along with the similar material he is producing, BigaCorp feels he has stolen IP from the company. They also believe his plan to travel abroad may be based on escaping legal issues by fleeing to a foreign country. BigaCorp has an image of Justin's computer and an image of a thumb drive found hidden in his old office. The thumb drive itself would be a violation of company policy if it were inserted into a company computer. We've been asked to review the artifacts for IP theft and foreign travel evidence.

This is only an exercise in Registry exploration (you will find other files, but please ignore everything that is not registry)

In this case, you will inspect the image of his computer and export the registry keys

1) Registry analysis
    a. Export the six registry keys and screengrab here.
        i. Where were the files found?
        (describe the path)
        Vol6 >Windows>System32>config
        ii. Screengrab exported files in a

        directory

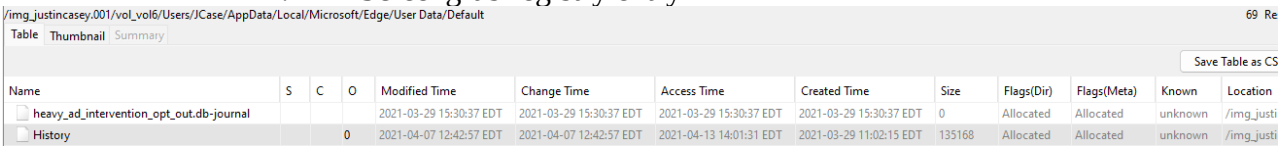

b. Review the last "typed URLs" for the case account (screengrab). Casey uses Internet Explorer 11

   i. What action did you take?

   Vol_vol6/JCase/AppData/Local/Microsoft/Edge/User Data/Default

   ii. Screengrab registry entry

c. Using your tool of choice, answer the following questions:

   i. What is the IP address of the local connection?

      1. Address:
      2. Screengrab:
      3. Was DHCP used
      4. Screen grab of DHCP server address

2, . Identify all users of the computer (screengrab)

1. How many users? 4
2. Screengrab:

3. Identify the computer OS and build number
    1. OS?
    2. Screengrab(s)

Name	DESKTOP-O3TPDEN
Program Name	Windows 10 Pro
Processor Architecture	AMD64
Temporary Files Directory	%SystemRoot%\TEMP
Path	C:\Windows
Product ID	00330-81489-35098-AA307
Owner	Windows User

4. Was a USB device was placed into the Casey computer.
    1. Y/N ?

    Yes
    3. Serial number and model/brand

    SanDisk Ultra

    3. Screengrab

Date/Time	2021-04-13 13:42:08 EDT
Device Make	SanDisk Corp.
Device Model	Ultra
Device ID	0401bf91e63ec22ebaa443e2508b61f5e933ed1e0ced3f9699102bb2096ba0a86274000000000000000000030e9ea1800176718815581078d2944f0
Source File Path	/img_justincasey.001/vol_vol6/Windows/System32/config/SYSTEM
Artifact ID	-9223372036854775733
